

Installation of TestNG in Eclipse

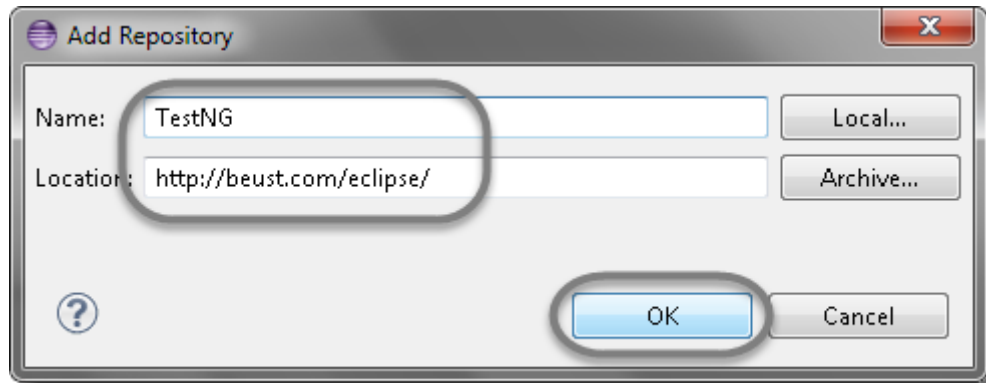

1) Launch the Eclipse IDE and from Help menu, click “Install New Software”.

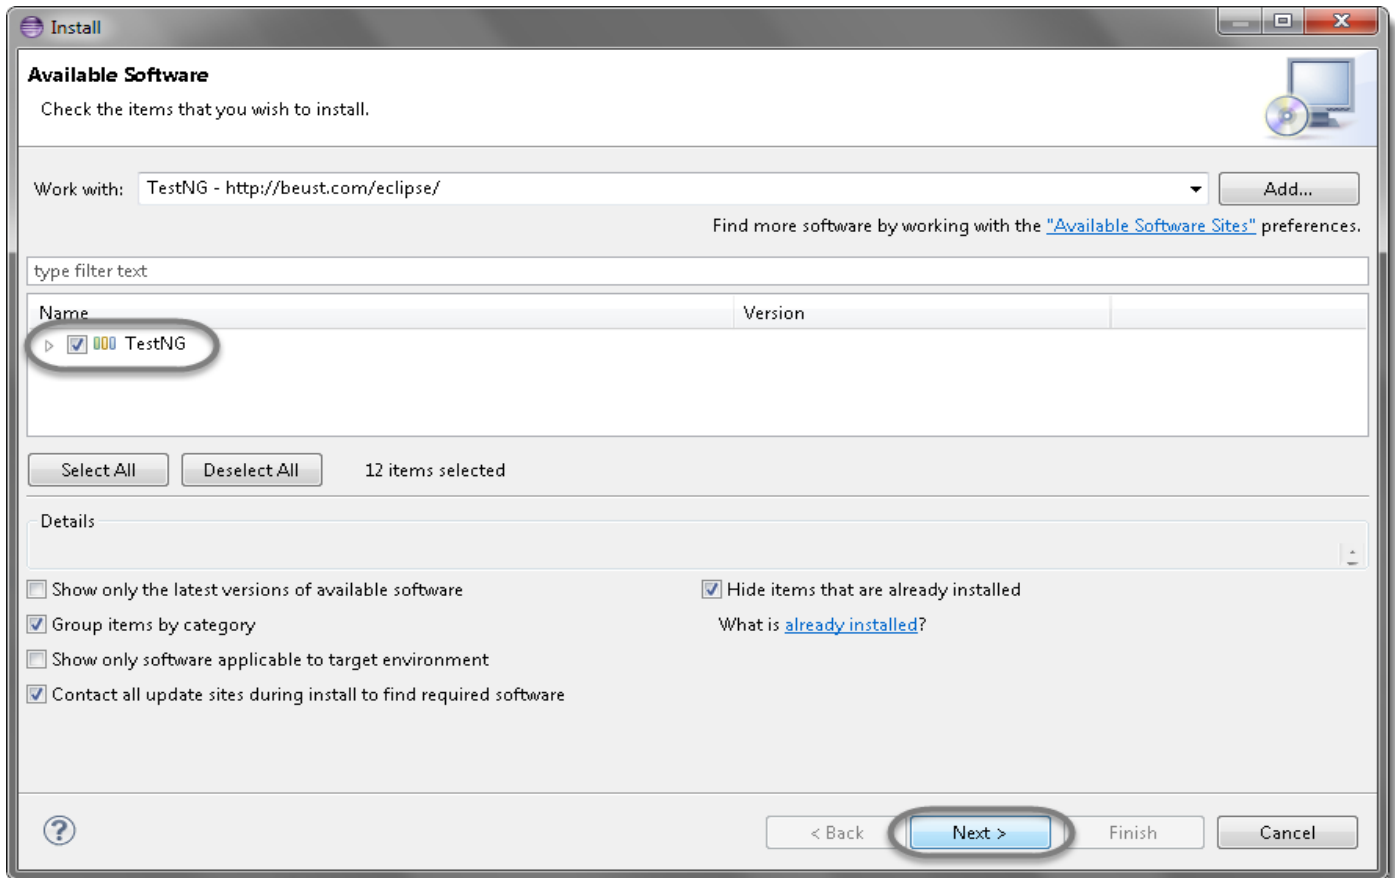

2) You will see a dialog window, click “Add” button.

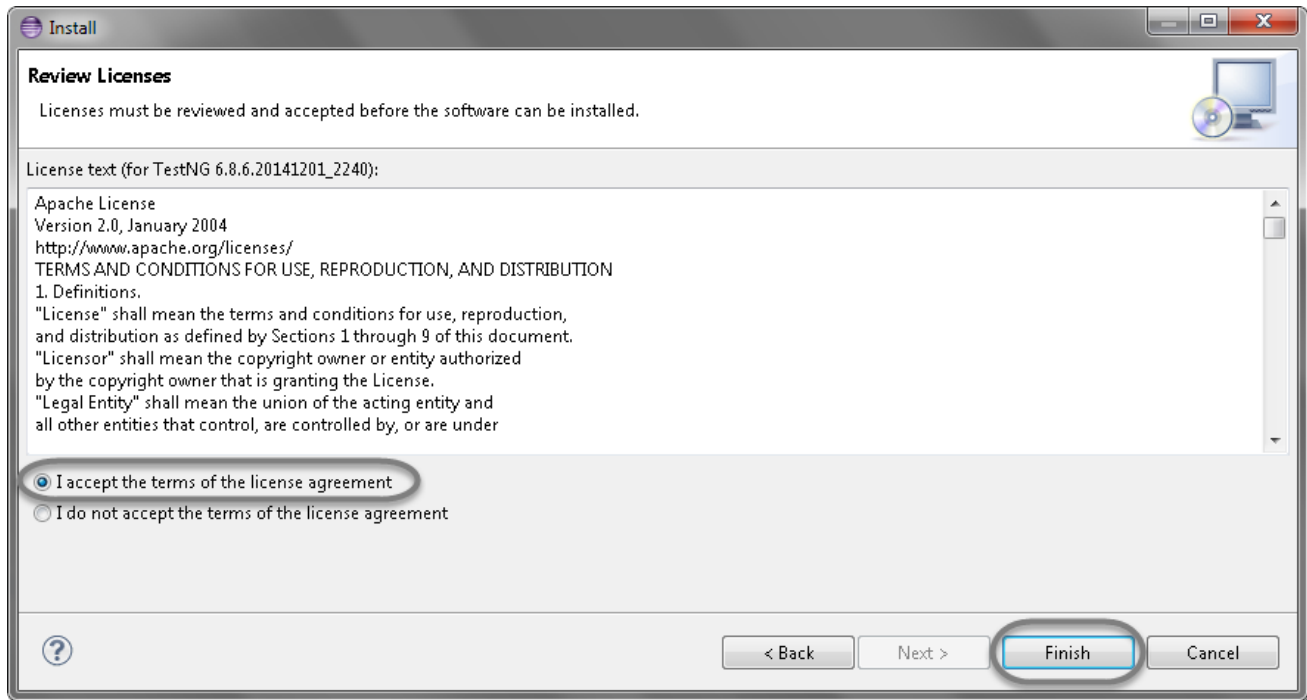

3) Type name as you wish, lets take "TestNG" and type "http://beust.com/eclipse/" as location. Click OK.

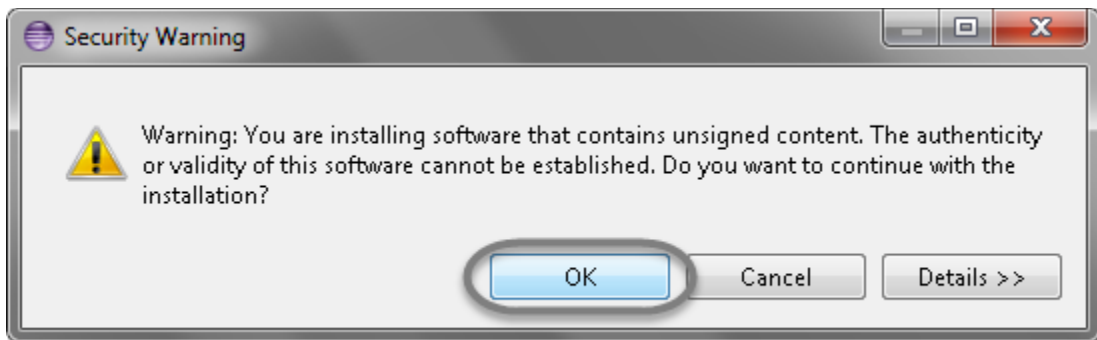

4) You come back to the previous window but this time you must see TestNG option in the available software list. Just Click TestNG and press "Next" button.

5) Click "**I accept the terms of the license agreement**" then click **Finish**.

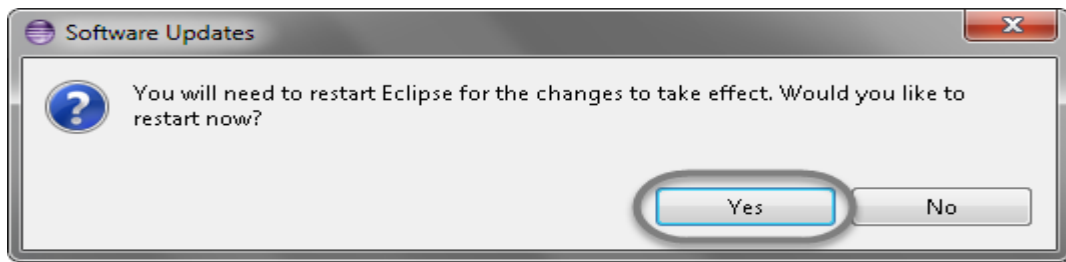

6) You may or may not encounter a Security warning, if in case you do just click **OK**.

7) Click **Next** again on the succeeding dialog box until it prompts you to Restart the Eclipse.

8) You are all done now, just Click **Yes**.

9) Proceed with your workplace.

10) After restart, verify if TestNG was indeed successfully installed. Right click on you project and see if **TestNG** is displayed in the opened menu.
